

# The OSI Challenger 1P MF

*Just starting microcomputing? You might try this minifloppy system from Ohio Scientific.*

Charles Curley  
6061 Lime Ave.  
Long Beach CA 90805

**T**he OSI Challenger 1P MF (minifloppy) is an excellent starter system for the beginner home computerist who wishes to get into computing with a maximum of ease but a minimum of expense. If the beginner wishes to expand, he can do so with no problems, but the unit is almost stand-alone as it comes. With one exception, the documentation is excellent, and OSI promises to provide user support for years to come.

Ohio Scientific has been advertising their new C1P MF as the first minifloppy system available for under \$1K. Strictly speaking, it is. However, a user will need one or two more items in order to use the system: a TV or monitor and perhaps a TV signal generator.

Due to FCC regulations, a computer manufacturer cannot sell a computer that you can just hook up to your TV, so you have three options: (1) buy a monitor and take the intermediate frequency signal the computer produces and feed it to the monitor; (2) modify your present TV for direct video signal injection (i.e., allow it to also function as a monitor); or (3) buy a TV signal generator to feed the computer's signal into your TV.

In any case, the additional expense will run \$20 to \$130, depending on which way you go and how much quality you insist on. Still, \$1100 is impressive for a minifloppy system.

This is definitely a bare-bones system. Peripherals such as an extensive monitor or color graphics are available as extras only. Considering that the proper customer for the Challenger 1P MF is the newcomer to personal computing, this is not a serious objection. Indeed, you can say that it gives the

customer something to look forward to.

This machine is clearly aimed at the beginner who wishes to enter personal computing as painlessly as possible. One could spend much less and buy, say, a KIM. Then you could program in assembly language and hand assemble. Or you could spend an amount comparable to the cost of the C1P MF and buy, say, a PET or a TRS-80. In either case, you would still have to use a cassette for bulk storage, with all the hassles that cassettes imply. A minifloppy drive for the PET or TRS-80 would cost \$400 or so, an amount the C1P MF owner could put to other uses.

## Software

In the bare-bones configuration of the C1P MF, the speed and convenience of the minifloppy disk is the main selling point of the system. The user is provided with a small DOS (disk operating system), the Pico DOS. With no memory expansion beyond the initial 12K RAM, the DOS supports two commands: LOAD X and SAVE X, where X is a digit from one to eight. X defines the storage area on the disk from which data is to be loaded or to which it is to be saved.

The addition of 8K more RAM (OSI list, \$138) will allow the use of a much more extensive DOS, Ohio Scientific's OS-65D (\$50). This DOS supports a much more extensive set of commands. It allows a file structure for programs. This means that a pro-

gram can input from or write to a file on disk (e.g., a word processor that would rapidly fill up the available RAM can put its output directly onto disk, where it has a lot more room). The enlarged DOS supports six character names for files, rename capabilities and other features.

The BASIC provided in the bare-bones machine is a Microsoft BASIC occupying 8K of ROM. It is 6½ digits in precision, has string functions, trig functions and full scientific notation, among other features. A number of these features are not found on other beginner's BASICs.

The OS-65D DOS supports a 9½ digit BASIC, which is slower than the ROM BASIC but more precise. This precision is suitable for scientific or business applications. This BASIC occupies 12K of RAM, and the user can software-select which BASIC he wishes to use.

As I mentioned, OSI does not have color graphics for the Challenger series. They expect to provide it as an option in the future. The screen resolution is 256 by 256, which divides into 32 lines of 32 characters each. However, the mechanics of televisions may restrict you to 24 lines by 24 characters.

OSI software is geared to this limitation. The characters themselves are eight dots by eight and include all standard ASCII characters. In addition, there are 160 special characters in ROM: gaming elements, graphic elements and others. Any character can be invoked simply by

*The C1P MF disk-based computer.*

## PET & CBM SOFTWARE BREAKTHROUGH

### MAIL LIST

Disk-based, updates & sorts by all fields. Specify 16K or 32K.

\$50.00

### BOWLING LEAGUE SECRETARY

Disk-based; generates recap & individual average record sheet at command. For 32K.

\$100.00

### CBM WORD PROCESSOR

Disk and ROM-based full screen editing & scrolling. Written in 6502 machine language. For 16K or 32K.

\$100.00

We also have a disk-based GENERAL LEDGER, ACCOUNTS PAYABLE, ACCOUNTS RECEIVABLE, PAYROLL & INVENTORY for 32K PET or CBM.

Each module..... \$120.00  
Complete 7 Modules..... \$800.00

Complete system with 32K computer, 2040 dual disk drive, 2022 tractor feed printer & GL, A/P, A/R, Payroll & INV. for \$4250.00

Featuring

**RCA 1802 COSMAC CPU**

Own a powerful home computer system, starting for just \$99.95—a price that gets you up and running the very first night... with your own TV for a video display. \$99.95 ELF II includes RCA 1802 8-bit microprocessor addressable to 64k bytes with DMA, interrupt, 16 registers, ALU, 256 byte RAM, full hex keyboard, two digit hex output display, stable crystal clock for timing purposes, RCA 1861 video IC to display your programs on any video monitor or TV screen and 5-slot plug-in expansion bus (less connectors) to expand ELF II into a giant!

### ELF II Explodes Into A Giant!

Master ELF II's \$99.95 capabilities, then expand with GIANT BOARD... KLUGE BOARD... 4k RAM BOARDS... TINY BASIC... ASCII KEYBOARD... LIGHT PEN... ELF-BUG MONITOR... COLOR GRAPHICS & MUSIC SYSTEM... TEXT EDITOR... ASSEMBLER... DISASSEMBLER... VIDEO DISPLAY BOARD... and, another great reason for getting your ELF now—

## BREAKTHROUGH!

Netronics proudly announced the release of the first 1802 FULL BASIC, written by L. Sandlin, with a hardware floating point RPN math package (requires 8k RAM plus ASCII and video display boards), \$79.95 plus \$2 p&h. Also available for RCA VIP and other 1802 systems (send for details)!

### Master This Computer In A Flash!

Regardless of how minimal your computer background is now, you can learn to program an ELF II in almost no time at all. Our *Short Course On Microprocessor & Computer Programming*—written in non-technical language—guides you through each of the RCA COSMAC 1802's capabilities, so you'll understand everything ELF II can do... and how to get ELF II to do it! Don't worry if you've been stumped by computer books before. The *Short Course* represents a major advance in literary clarity in the computer field. You don't have to be a computer engineer in order to understand it. Keyed to ELF II, it's loaded with "hands on" illustrations. When you're finished with the *Short Course*, neither ELF II nor the RCA 1802 will hold any mysteries for you.

In fact, not only will you now be able to use a personal computer creatively, you'll also be able to read magazines such as *BYTE*, *INTERFACE*, *AGE*, *POPULAR ELECTRONICS* and *PERSONAL COMPUTING* and fully understand the articles. And, you'll understand how to expand ELF II to give you the exact capabilities you need!

If you work with large computers, ELF II and the *Short Course* will help you understand what they're doing.

### Get Started For Just \$99.95, Complete!

\$99.95 ELF II includes all the hardware and software you need to start writing and running programs at home, displaying video graphics on your TV screen and designing circuits using a microprocessor—the very first night—even if you've never used a computer before.

ELF II connects directly to the video input of your TV set, without any additional hardware. Or, with an \$8.95 RF modulator (see coupon below), you can connect ELF II to your TV's antenna terminals instead.

ELF II has been designed to play all the video games you want, including a fascinating new target/misile game that was developed specifically for ELF II. But games are only the icing on the cake. The real value of ELF II is that it gives you a chance to write machine language programs—and machine language is the fundamental language of all computers. Of course, machine language is only a starting point. You can also program ELF II with assembly language and tiny BASIC. But ELF II's machine language capability gives you a chance to develop a working knowledge of computers that you can't get from running only

## Write and run programs—the very first night—even if you've never used a computer before!

You're up and running with video graphics for just \$99.95 — then use low cost add-ons to create your own personal system that rivals home computers sold for 5-times ELF II's low price!

pre-recorded tape cassettes.

### ELF II Gives You The Power To Make Things Happen!

Expanded, ELF II can give you more power to make things happen in the real world than heavily advertised home computers that sell for a lot more money. Thanks to an ongoing commitment to develop the RCA 1802 for home computer use, the ELF II products—being introduced by Netronics—keep you right on the outer fringe of today's small computer technology. It's a perfect computer for engineering, business, industrial, scientific and personal applications.

Plug in the GIANT BOARD to record and play back programs, edit and debug programs, communicate with remote devices and make things happen in the outside world. Add KLUGE (prototyping) Board and you can use ELF II to solve special problems such as operating a complex alarm system or controlling a printing press. Add 4k RAM Boards to write longer programs, store more information and solve more sophisticated problems.

ELF II adds on already include the ELF II Light Pen and the amazing ELF-BUG Monitor—two extremely recent breakthroughs that have not yet been duplicated by any other manufacturer.

The ELF-BUG Monitor lets you debug programs with lightning speed because the key to debugging is to know what's inside the registers of the microprocessor. And, with the ELF-BUG Monitor, instead of single stepping through your programs, you can now display the entire contents of the registers on your TV screen. You find out immediately what's going on and can make any necessary changes.

The incredible ELF II Light Pen lets you write or draw anything you want on a TV screen with just a wave of the "magic wand." Netronics has also introduced the ELF II Color Graphics & Music System—more breakthroughs that ELF II owners were the first to enjoy!

### ELF II Tiny BASIC

Ultimately, ELF II understands only machine language—the fundamental coding required by all computers. But, to simplify your relationship with ELF II, we've introduced an ELF II Tiny BASIC that makes communicating with ELF II a breeze.

### Now Available! Text Editor, Assembler, Disassembler And A New Video Display Board!

The Text Editor gives you word processing ability and the ability to edit programs or text while it is displayed on your video monitor. Lines and characters may be quickly inserted, deleted or changed. Add a printer and ELF II can type letters for you—error free—plus print names and addresses from your mailing list!

ELF II's Assembler translates assembly language programs into hexadecimal machine code for ELF II use. The Assembler features mnemonic abbreviations rather than numerics so that the instructions on your programs are easier to read—this is a big help in catching errors.

ELF II's Disassembler takes machine code programs and produces assembly language source listings. This helps you understand the programs you are working with... and improve them when required.

The new ELF II Video Display Board lets you generate a sharp, professional 32 or 64 character by 16 line upper and lower case display on your TV screen or video monitor—dramatically improving your unexpanded \$99.95 ELF II. When you get into longer programs, the Video Display Board is a real blessing!

### Now Available!

- ☐ A-D/D-A Board Kit includes 1 channel (expandable to 4) D-A, A-D converters, \$39.95 plus \$2 postage & handling.
- ☐ PILOT Language—A new text-oriented language that allows you to write educational programs on ELF II with speed and ease! Write programs for games... unscrambling sentences... spelling drills... "fill in the missing word" tests, etc! PILOT is a must for any ELF II owner with children. *PILOT Language on cassette tape, only \$19.95 postpaid!*
- ☐ Game Package on cassette tape (requires 4k RAM), \$9.95 plus \$2 postage & handling.

## CUDDLY SOFTWARE

Unbreakable Systems/Support Software  
for any 1802 system.

**CS05 Series (Operating System)**—aids development and modification of user programs with software tools, like Add/Delete Byte, which also expand/contract the remainder of the memory page. User Programs also interface via Sid. Call/Ret. for video routines, I/O drivers, etc. 1861 alphanumeric output via Screen Driver (10 lines, ave. 17 char/line, auto-scroll). User graphics also made easy.

**CSTP Series (Trace Program)**—1802 CPU in software! Displays internal status as it simulates user programs for debugging, improvement, or learning 1802 operation. A must for every programmer! Intervene to alter simulation dynamically, by changing parameters, overriding program branch decisions, etc. Memory protected! CSTP cannot be bombed by the worst test program or user key-in errors! Needs 2.5K RAM, plus user program area.

COMING SOON: Assembler; Text Editor; Text Formatter; I/O for 1802 PILOT!

TAILORED to your system! Write for details and low prices.

Yes! I want my own computer! Please rush me—

supply)

- ☐ Power Supply (required) \$4.95 postpaid
- ☐ RCA 1802 User's Manual \$5 postpaid
- ☐ Tom Pittman's *Short Course On Microprocessor & Computer Programming* teaches you just about everything there is to know about ELF II or any RCA 1802 computer. Written in non-technical

language, it's a learning breakthrough for engineers and laymen alike \$5 postpaid.

☐ Deluxe Metal Cabinet with plexiglas dust cover for ELF II. \$29.95 plus \$2.50 p&h.

☐ I am also enclosing payment (including postage & handling) for the items checked below!

☐ I want my ELF II wired and tested with power supply. RCA 1802 User's Manual and Short Course—all for just \$149.95 plus \$3 p&h.

ALSO AVAILABLE FOR ELF II

☐ GIANT BOARD™ kit with Cassette I/O, RS 232-C/TTY I/O, 8-bit P/I/O decoders for 14 separate I/O instructions and a system monitor/editor. \$39.95 plus \$2 p&h.

☐ Kluge (Prototype) Board accepts up to 36 IC's. \$17.00 plus \$1 p&h.

☐ 4k Static RAM kit. Addressable to any 4k page to 64k. \$89.95 plus \$3 p&h.

☐ Gold plated 86-pin connectors (one required for each plug-in board). \$5.70 ea. postpaid.

☐ Expansion Power Supply (required when adding 4k RAM). \$34.95 plus \$2 p&h.

☐ Professional ASCII Keyboard kit with 128 ASCII upper/lower case set, 96 printable characters, onboard regulator, parity logic selection and choice of 4 hand-shaking signals to mate with almost any computer. \$64.95 plus \$2 p&h.

☐ Deluxe metal cabinet for ASCII Keyboard. \$19.95 plus \$2.50 p&h.

☐ Video Display Board kit lets you generate a sharp professional 32 or 64 character by 16 line upper and lower case display on your TV screen or video monitor—dramatically improving your unexpanded \$99.95 ELF II. (Fits inside ASCII Keyboard cabinet). \$89.95 plus \$2 p&h.

☐ ELF II Tiny BASIC on cassette tape. Commands include SAVE, LOAD, etc. \$1.00.

26 variables A-Z, LET, IF/THEN, INPUT, PRINT, GO TO, SUB, RETURN, END, REM, CLEAR, LIST, RUN, PLOT, PEEK, POKE. Comes fully documented and includes alphanumeric generator required to display alphanumeric characters directly on your TV screen without additional hardware. Also plays tick-tack-toe plus a drawing game that uses ELF II's hex keyboard as a joystick. 4k memory required. \$14.95 postpaid.

☐ Tom Pittman's *Short Course on Tiny Basic* for ELF II. \$5 postpaid.

☐ ELF-BUG™ Deluxe System Monitor on cassette tape. Allows displaying the contents of all registers on your TV at any point in your program. Also displays 24 bytes of memory with full addresses, blinking cursor and auto scrolling. A must for the serious programmer! \$14.95 postpaid.

☐ Text Editor on cassette tape gives you the ability to insert, delete or edit lines and words from your programs while they are displayed on your video monitor. (Add printer and you can use ELF II to type error-free letters plus insert names and addresses from your mailing list.) \$19.95 postpaid.

☐ Assembler on cassette tape translates assembly language programs into hexadecimal machine code for ELF II use. Mnemonic abbreviations for instructions (rather than numerics) make programs easier to read and help prevent errors. \$19.95 postpaid.

☐ Disassembler on cassette tape takes machine code

programs and produces assembly language source listings to help you understand and improve your programs. \$19.95 on cassette tape.

**SAVE \$9.90**—Text Editor, Assembler & Disassembler purchased together. Only \$49.95! (Require Video Display Board plus 4k memory.)

☐ ELF II Light Pen, assembled & tested. \$7.95 plus \$1 p&h.

☐ ELF II Color Graphics & Music System Board kit. \$49.95 plus \$2 p&h.

☐ ELF II connects directly to the video input of your TV set without additional hardware. To connect ELF II to your antenna terminals instead, order RF Modulator. \$8.95 postpaid.

DEALER INQUIRIES INVITED

POKEing the appropriate memory location with its number. A full catalog of the symbols available with their numbers in decimal (for use with BASIC) and hex (for use with machine code) is included with the manual.

The keyboard is totally software controlled. This gives the ambitious programmer much greater flexibility than with a hardware-controlled keyboard. For one thing, it allows the detection of up to eight simultaneous key depressions. One application of this facility might be to program eight keys into two pseudo-joystick arrangements. The auto-repeat feature of the keyboard software is also useful.

This flexibility also allows multiple applications of the keys, which are not immediately apparent. For example, in BASIC mode, a /SHIFT/ o deletes the last character, and a /SHIFT/ p deletes the current line. These two functions greatly facilitate program and text editing.

One function bodes well for the use of the C1P MF as a terminal. The /SHIFT/ o function appears on the display by inserting a / (ASCII 2F), rather than removing the offending character. With the cost of modems coming down, private phone systems and micro-oriented data networks in the

offing, many home computers will be used as terminals as well as stand-alone systems. OSI designed the C1P MF to be used as a terminal as well as a stand-alone, so adding this function will be easy.

### Documentation

Contrary to OSI's reputation for bad or nonexistent documentation, I found the C1P MF documentation to be quite good. I quickly found whatever information I needed to use the machine. The beginning BASIC programmer will need a good book on the system, but this is true of any starter system. Anyone who wishes to program in assembly language or machine language is similarly encouraged to have a good book on 6502 programming handy. The manual does have a number of BASIC demonstrator programs that the user can enter and modify for the learning experience he will gain.

A source listing of the BASIC was noticeably missing from the documentation. This is a result of having Microsoft write the BASIC; a standard part of their contract is that no source listing can be released by the manufacturer. Fortunately for the typical user of the C1P MF, this is not a serious objection.

### Options

A fully expanded system

The C1P, the cassette version of the C1P MF.

could include: 32K RAM, dual minifloppies, a cassette recorder, a printer, a modem and a number of other peripheral boards. The user can buy ready-made peripherals or build his own.

The user who has little or no interest in programming for himself can purchase ready-to-run software from OSI. Several game disks, personal or business disks and education disks are already available from OSI, with each disk containing up to eight programs. As far as I know, there are no other sources for software, but this should change as more units are sold.

The user who wants to buy a cassette machine now and expand up to a disk system later should consider the C1P, the cassette version of the C1P MF.

With only 4K of RAM and sans cassette recorder, the unit is otherwise identical to the C1P MF and lists for \$349. A minifloppy (\$450), 8K of RAM (\$138) and some diskettes (\$8 each) complete the conversion.

About the only problem I had reviewing the Challenger was finding one! I called various dealers in my area (southern California) as well as Ohio Scientific. I finally found one at Anaheim Computer and Video, who were most cooperative. If you are in southern California and wish to see a machine, give them a call (714/995-0224). Otherwise, call or write Ohio Scientific (1333 S. Chillicothe Rd., Aurora OH 44202; 216/562-3101) or OSI West (15461 Chemical Lane, Huntington Beach CA 92649; 714/891-2457). ■

## 10 MEGABYTE HARD DISK for the

**apple computer** by Lobo

- \* \$4990 complete
  - Includes S & H in Cont. U.S.A.
  - Calif. res. add 6% sales tax
- \* \$3390 Add on drive w/Power Supply
  - Includes S & H in Cont. U.S.A.
  - Calif. res. add 6% sales tax
- \* Up to 16 drives per controller
- \* 3 ways to format the disk—take your choice
  - 1 - 10 megabyte drive
  - 24 - 8" floppy drives
  - 91 - mini floppy drives
- \* Hardware/Software compatible
- \* Disk Diagnostics included
- \* Dealer inquiries invited

\* Fully hardware/software compatible. Our D.O.S. uses all of apples D.O.S. commands in the same manner as apples, so a disk program that uses apples disk commands will work on this hard disk.

\* Winchester technology—IMI-7710 disk drive

\* Lobo disk controller—Z-80 based.

\* Disk diagnostics include:

• Reading & writing track & sensor

• Wild card search on catalogs which allows you to locate program titles by using key characters of your choice.

\* Up to 16 disk drivers per controller - others only allow 4

\* System price \$4990, includes disk drive, controller, power supply cables & disk operating system - others cost \$5350.

\* Add-on disk \$3390 includes additional power supply - others do not include the power supply, they use one power supply for all drives, requiring shut down of one drive, before power up of another.

\* D.O.S. with choices, allows you to format the disk into 91 diskette sized volumes, or 24 8" floppy sized volumes or 1 big 10 megabyte volume - others allow you to format to 88 diskette sized volumes only.

\* Manufactured by Lobo, a progressive disk drive company that is always looking for ways to make disk drive use easier & more versatile.
