**COMPUTER BOARDS 600 & 610**

as used in

**Challenger Series**

**SUPERBOARD II**

**MODEL C1P**

**MODEL C1PMF**

## GENERAL SERVICING/SAFETY PRECAUTIONS

Use an isolation transformer for bench servicing.

Maintain line voltage at 120VAC.

Remove power from unit before removing or installing chips.

Use extreme caution when handling printed circuit boards. Ground yourself before handling boards.

Do not use a soldering device which has current flowing in its tip.

Use an isolation (times 10) probe on scope.

Do not remove or install boards or minifloppy with unit turned on.

Install RAM in Chip Enable sequence only.

**Caution:** *Ground path on the boards is parallel to the B+ path on the opposite side of the board.*

## DISASSEMBLY INSTRUCTIONS

Lay unit on a protective surface with top side down.

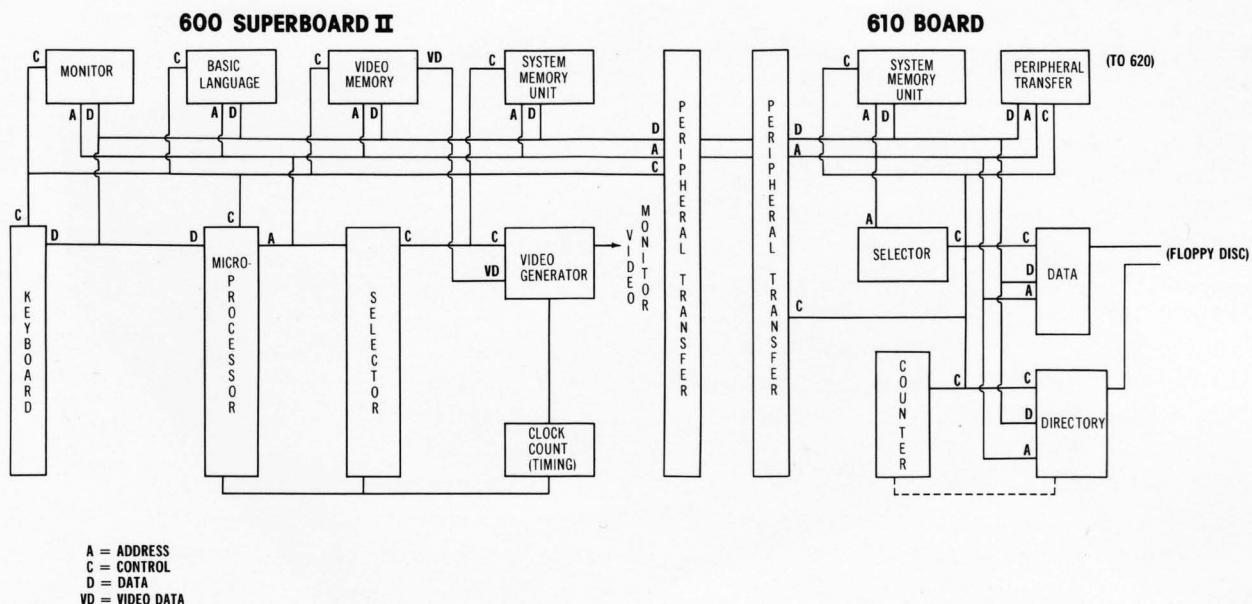

Remove six large screws from cabinet bottom and remove cabinet bottom.

Unplug minifloppy. (Model Challenger C1PMF.)

Remove five screws from Superboard II/600 board.

Lift printed board(s) from unit. Unplug power supply plug(s) and video/cassette connector from Superboard II/600 board.

Remove four screws and spacers to separate boards. (Model Challenger C1PMF only.)

## TROUBLESHOOTING GUIDE COLOR CO-ORDINATED

See schematic for the colors matching those in this guide for circuitry to be checked.  
When a portion of a chip function is being referred to for checking, this is indicated by the partial coloring of chip.

### PRELIMINARY SETUP

"SHIFT LOCK" key must be depressed before any troubleshooting is attempted.

"BREAK" key must be depressed and then released.

Confirm power supply(s) output of 5V DC.

These steps are necessary before computer will operate.

### CRYSTAL OSCILLATOR - 600 BOARD

Connect scope to U58, Pin 8. Waveform should be similar to WAVEFORM 2. This confirms operation of X1 and associated circuitry.

### 02 CLOCK (OSC.) - 600 BOARD

Connect scope to Pin 39 of U8. Waveform should be similar to WAVEFORM 1. This will check the operation of chip portions associated with this circuitry (U8, U30, U58).

### VIDEO SIGNALS - 600 BOARD

To check video and sync pulses generated by the computer and fed to the TV monitor, connect scope to VIDEO JACK (J6). Waveforms should be similar to WAVEFORMS 9 and 10.

WAVEFORMS 3 through 8 aid in checking circuits used in video development. See U30 for scope connections.

These steps basically verify operation of circuitry that generates VIDEO and SYNC pulses. Effectively, this will check U30, U59, U60, U61, U65, U69 and parts of U56, U62, and U70.

### "BYTES FREE" MEMORY CHECK - 600 & 610 BOARDS

The ram circuitry check is built into the computer, as long as most all other circuitry is working.

To check ram circuitry, follow this procedure:

1. Press "BREAK".
2. Press "C".

Computer will ask "memory size". Ignore the question, press "RETURN".

Computer will ask "terminal width". Ignore the question, press "RETURN".

Computer will display XXXX BYTES free, etc.

If the "BYTES FREE" number does not represent the total number of your system, this will indicate what memory or associated circuitry has failed.

The following chart indicates the byte free count and the chips involved.

To find the defective memory rams or associated circuitry, observe bytes free indication on screen.

Go to the following chart and find the bytes free column to locate associated chips.

EXAMPLE 1: The computer is equipped with MEMORY totaling 19,711 BYTES FREE.

The monitor screen indicates 12,543 bytes free. Go to Chart 12,543. Adjacent chips U23 and U31 are operating properly.

This would indicate, then, that U24 and/or U32 and/or associated circuitry is malfunctioning.

EXAMPLE 2: The computer is equipped with MEMORY totaling 19,711 BYTES FREE.

The monitor screen indicates 12,540 bytes free. Go to chart. 12,540 falls between 11,519 and 12,543.

This indicates U23 and/or U31 and/or associated circuitry is malfunctioning.

NOTE: Chips adjacent to the next higher number of bytes free displayed on the monitor are the most likely defective device(s).

If above steps do not solve failure(s), continue.

## CHIP SELECT LINES (RS(0 thru 7) AND CE(0 thru 23))

To check chip select lines, bring the computer into machine language mode by depressing "BREAK", then "M". A six-character alpha-numeric display will appear on the monitor. Use the first four characters for the address code as shown charted below. Connect logic probe to chip select line.

Press "." then enter address selected from chart. If operating properly a pulse should be indicated on logic probe when the last character is entered.

### RAMS

BYTES FREE	CHIPS OR ASSOCIATED CIRCUITRY	MACHINE ADDRESS NUMBERS

31999	U58 U66	7C00-7FFF	"

## MINIFLOPPY SIGNAL CHECK - 610 BOARD

MINIFLOPPY must be in "disk" operating mode by depressing "BREAK" then "D".

To check for the computer pulse required to get the signal "to" and "from", waveforms should be similar to WAVEFORMS 21, 22, 23, and 24.

For computer output data to minifloppy in "directory cycle", check for "grass" as shown in WAVEFORM 25 while in this "directory cycle".

NOTE: This cycle takes place immediately after depressing "BREAK" and then "D".

For proper operation of computer output program data (to minifloppy) with computer in the "disk storage" mode, check for "grass" as shown in WAVEFORM 27.

To check for data from the minifloppy, select program from disk selection shown on monitor.

Select program, depress "RETURN" and check immediately during the selection cycle for "grass" as shown in WAVEFORM 26.

## AUDIO CASSETTE/TAPE SIGNAL CHECK - 600 BOARD

Computer circuitry handling signals going to cassette should be similar to WAVEFORMS 16 and 17.

When storing a program going out to tape recorder, see WAVEFORMS 18, 19, and 20.

To confirm signal coming from cassette: while loading a program coming from the cassette, proper operation is indicated by WAVEFORMS 11, 12, 13, 14, and 15. WAVEFORM 15 amplitude will depend on volume control setting of cassette.

## MICROPROCESSOR CHIP (CPU) OPERATION - 600 BOARD

If "BREAK" key does not clear screen of random pattern, processor may not be working. Be sure key switch is functioning.

To verify processor is working, a pulse indication taken by scope (set on  $1\mu\text{Sec.}$  range) or logic probe at address lines (A0 through A15) at U8 will verify. No signal on an address line will suggest a defective U8 or a problem on that address line.

## ROM MONITOR AND ROM BASIC CHIPS OPERATION CHECK

SYMPTOM: "BASIC" mode will not operate as "C" key is depressed and display does not change. The "DISK" mode as well as "MACHINE" mode operate properly. This indicates a problem with ROM BASIC 1, 2, 3 (U9, U10, U11).

SYMPTOM: "BASIC", "DISK", AND "MACHINE" modes not functioning. This indicates a problem with one or more of these chips and/or associated circuitry;

ROM MONITOR (U13)  
ROM BASIC 4 (U12)  
MICROPROCESSOR (CPU-U8)  
RAMS (U31 AND/OR U45)

## 600 BOARD PARTS LIST AND DESCRIPTION

### **WAVEFORMS TAKEN IN "BASIC" MODE UNLESS OTHERWISE INDICATED** **ELECTRICAL ADJUSTMENT**

#### **R57 DURATION (TAPE PULSE)**

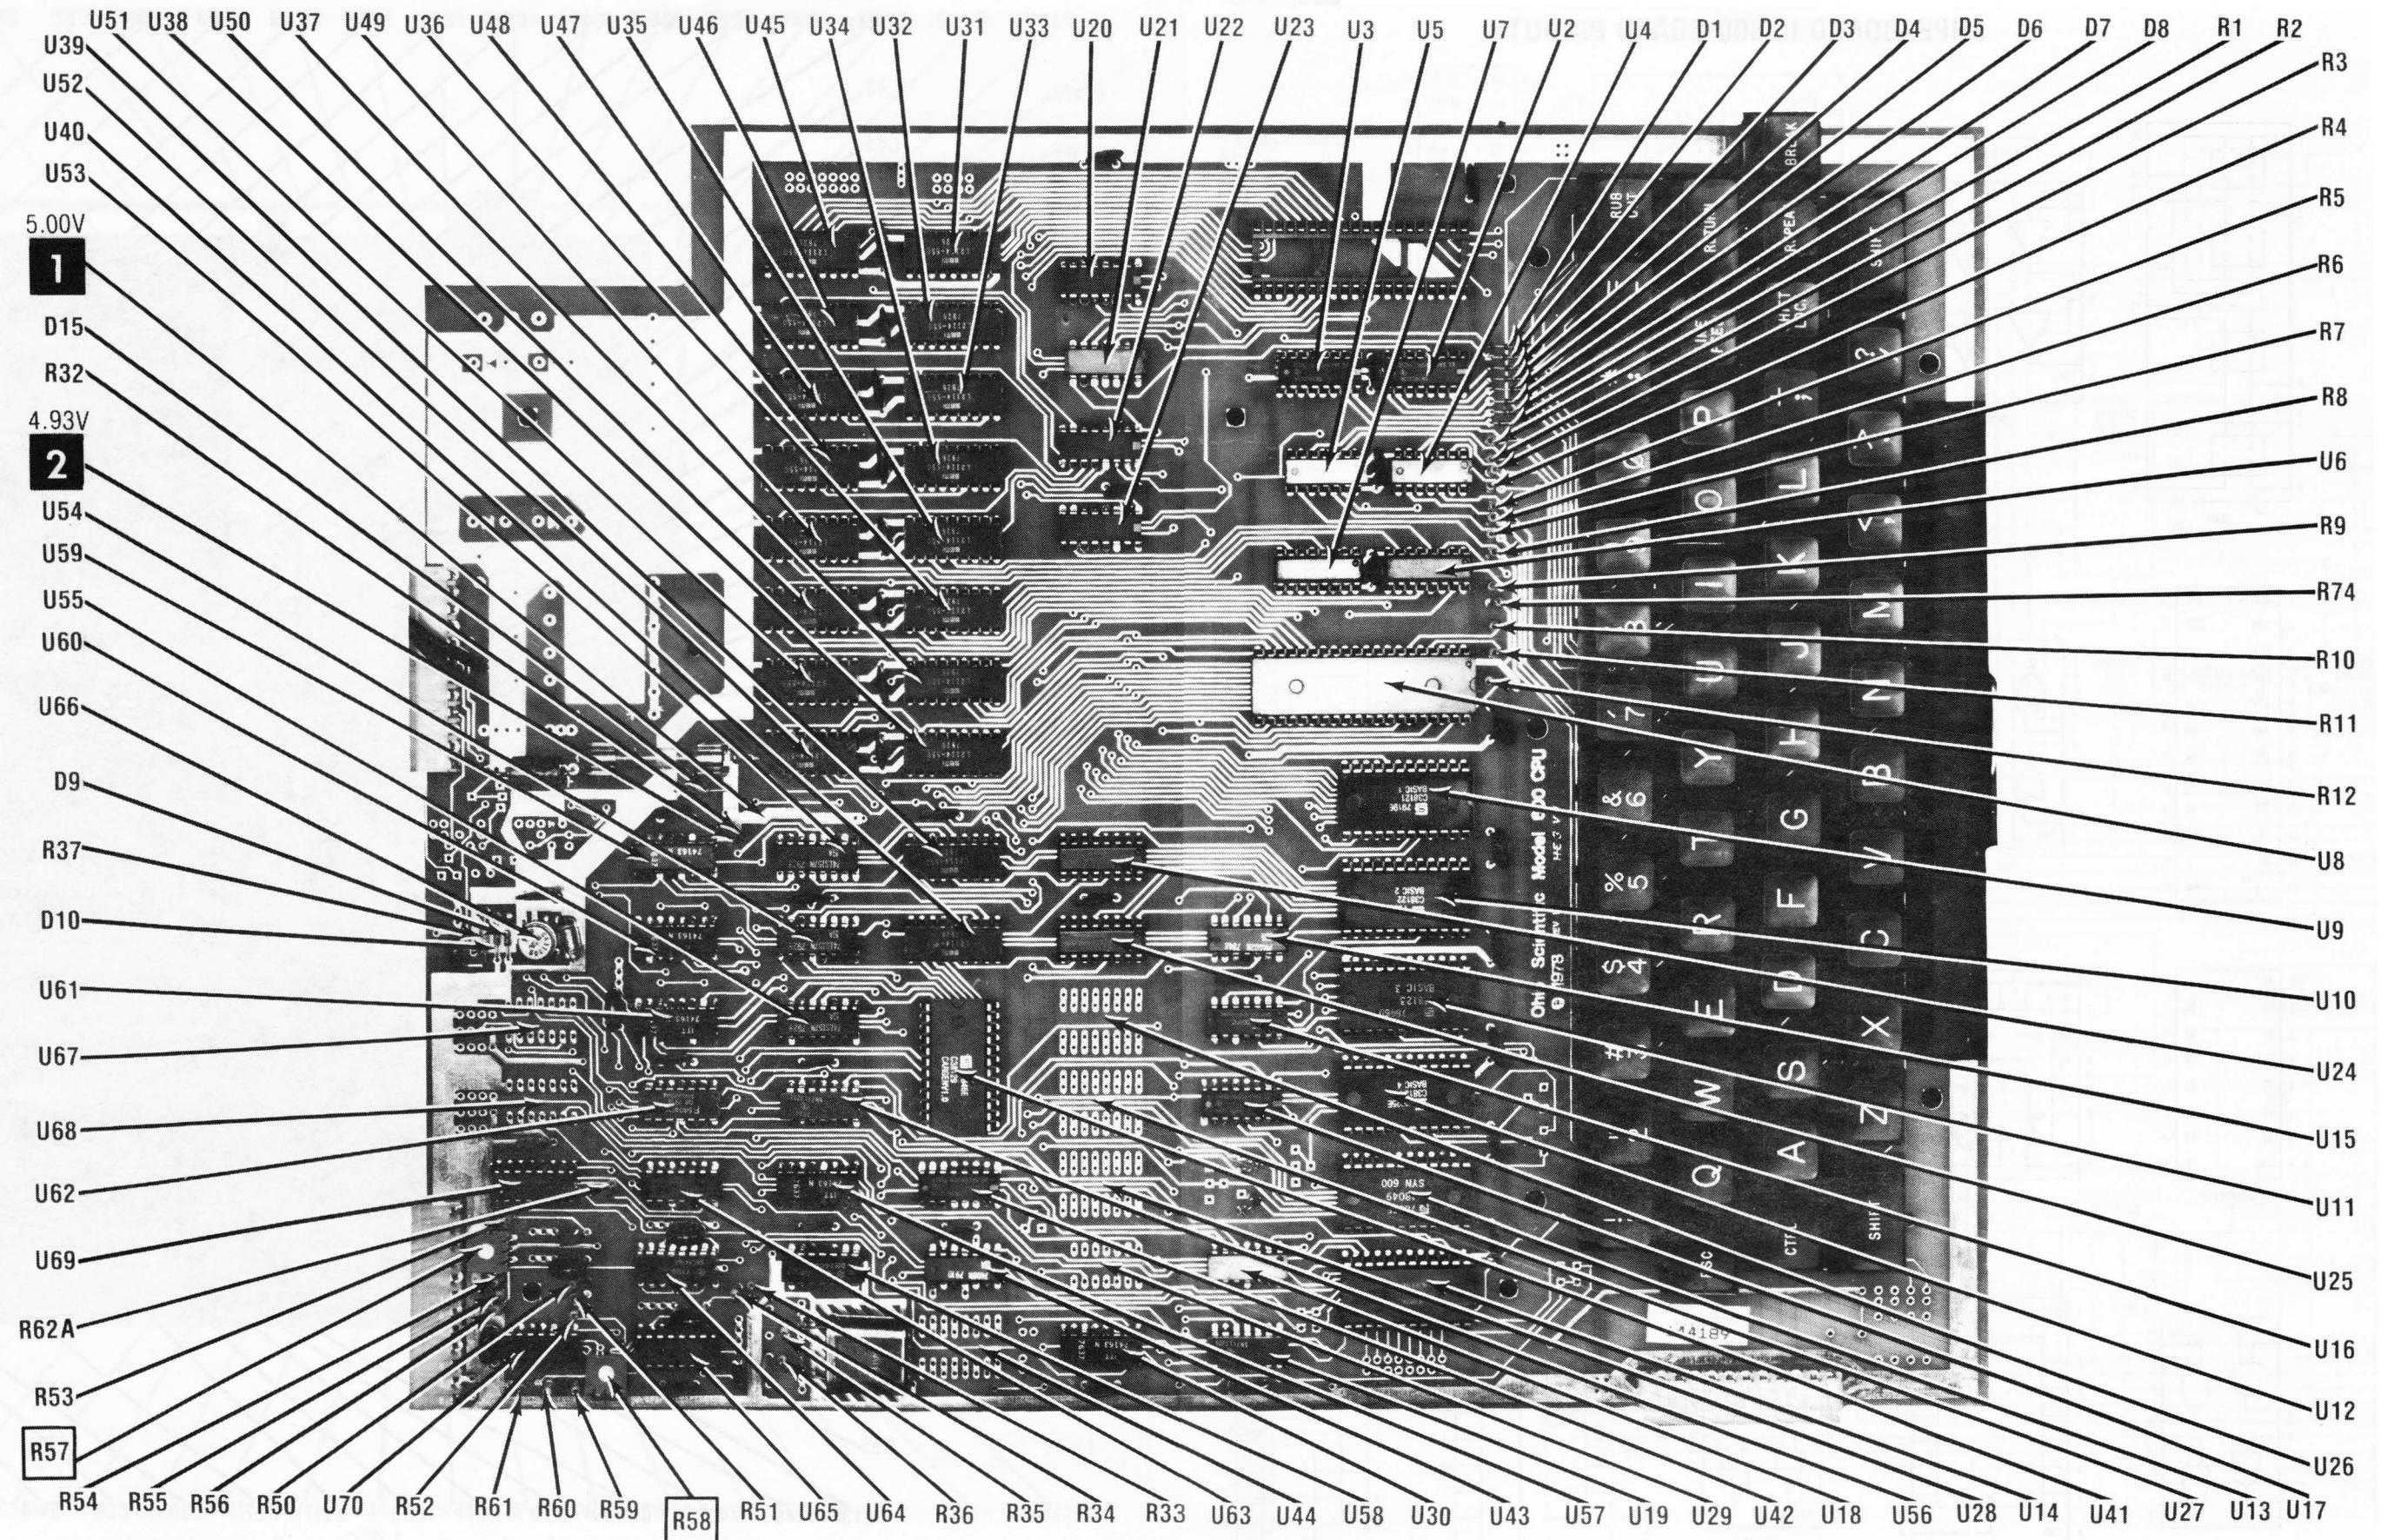

Connect jumper between pin 9 and 10 of J2.

Press	"RESET"
Press	"C"
Press	"RETURN"
Press	"RETURN"
Type	10 PRINT "U"; Return
Type	20 GO TO 10 Return
Type	SAVE Return
Type	RUN Return

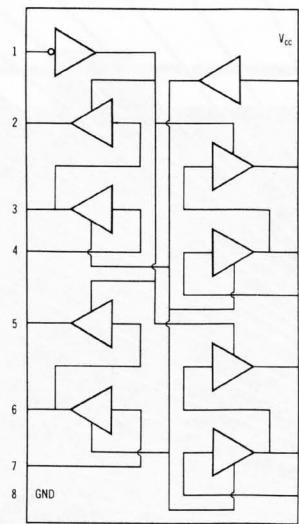

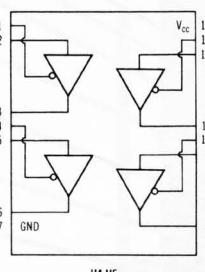

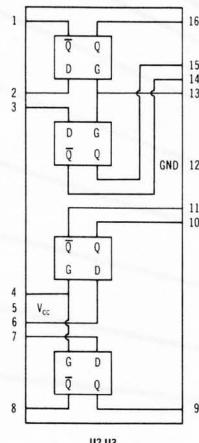

Input of scope to pin 5 of U69. Adjust R57 for a positive pulse width of at least 500  $\mu$  seconds but not over 640  $\mu$  seconds. Disconnect jumper.

#### **R58 VIDEO (MONITOR)**

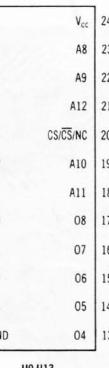

Place computer into basic and type in a full monitor of characters.  
Adjust R58 for best contrast but do not allow unit to lose sync.

#### R9 TX DATA

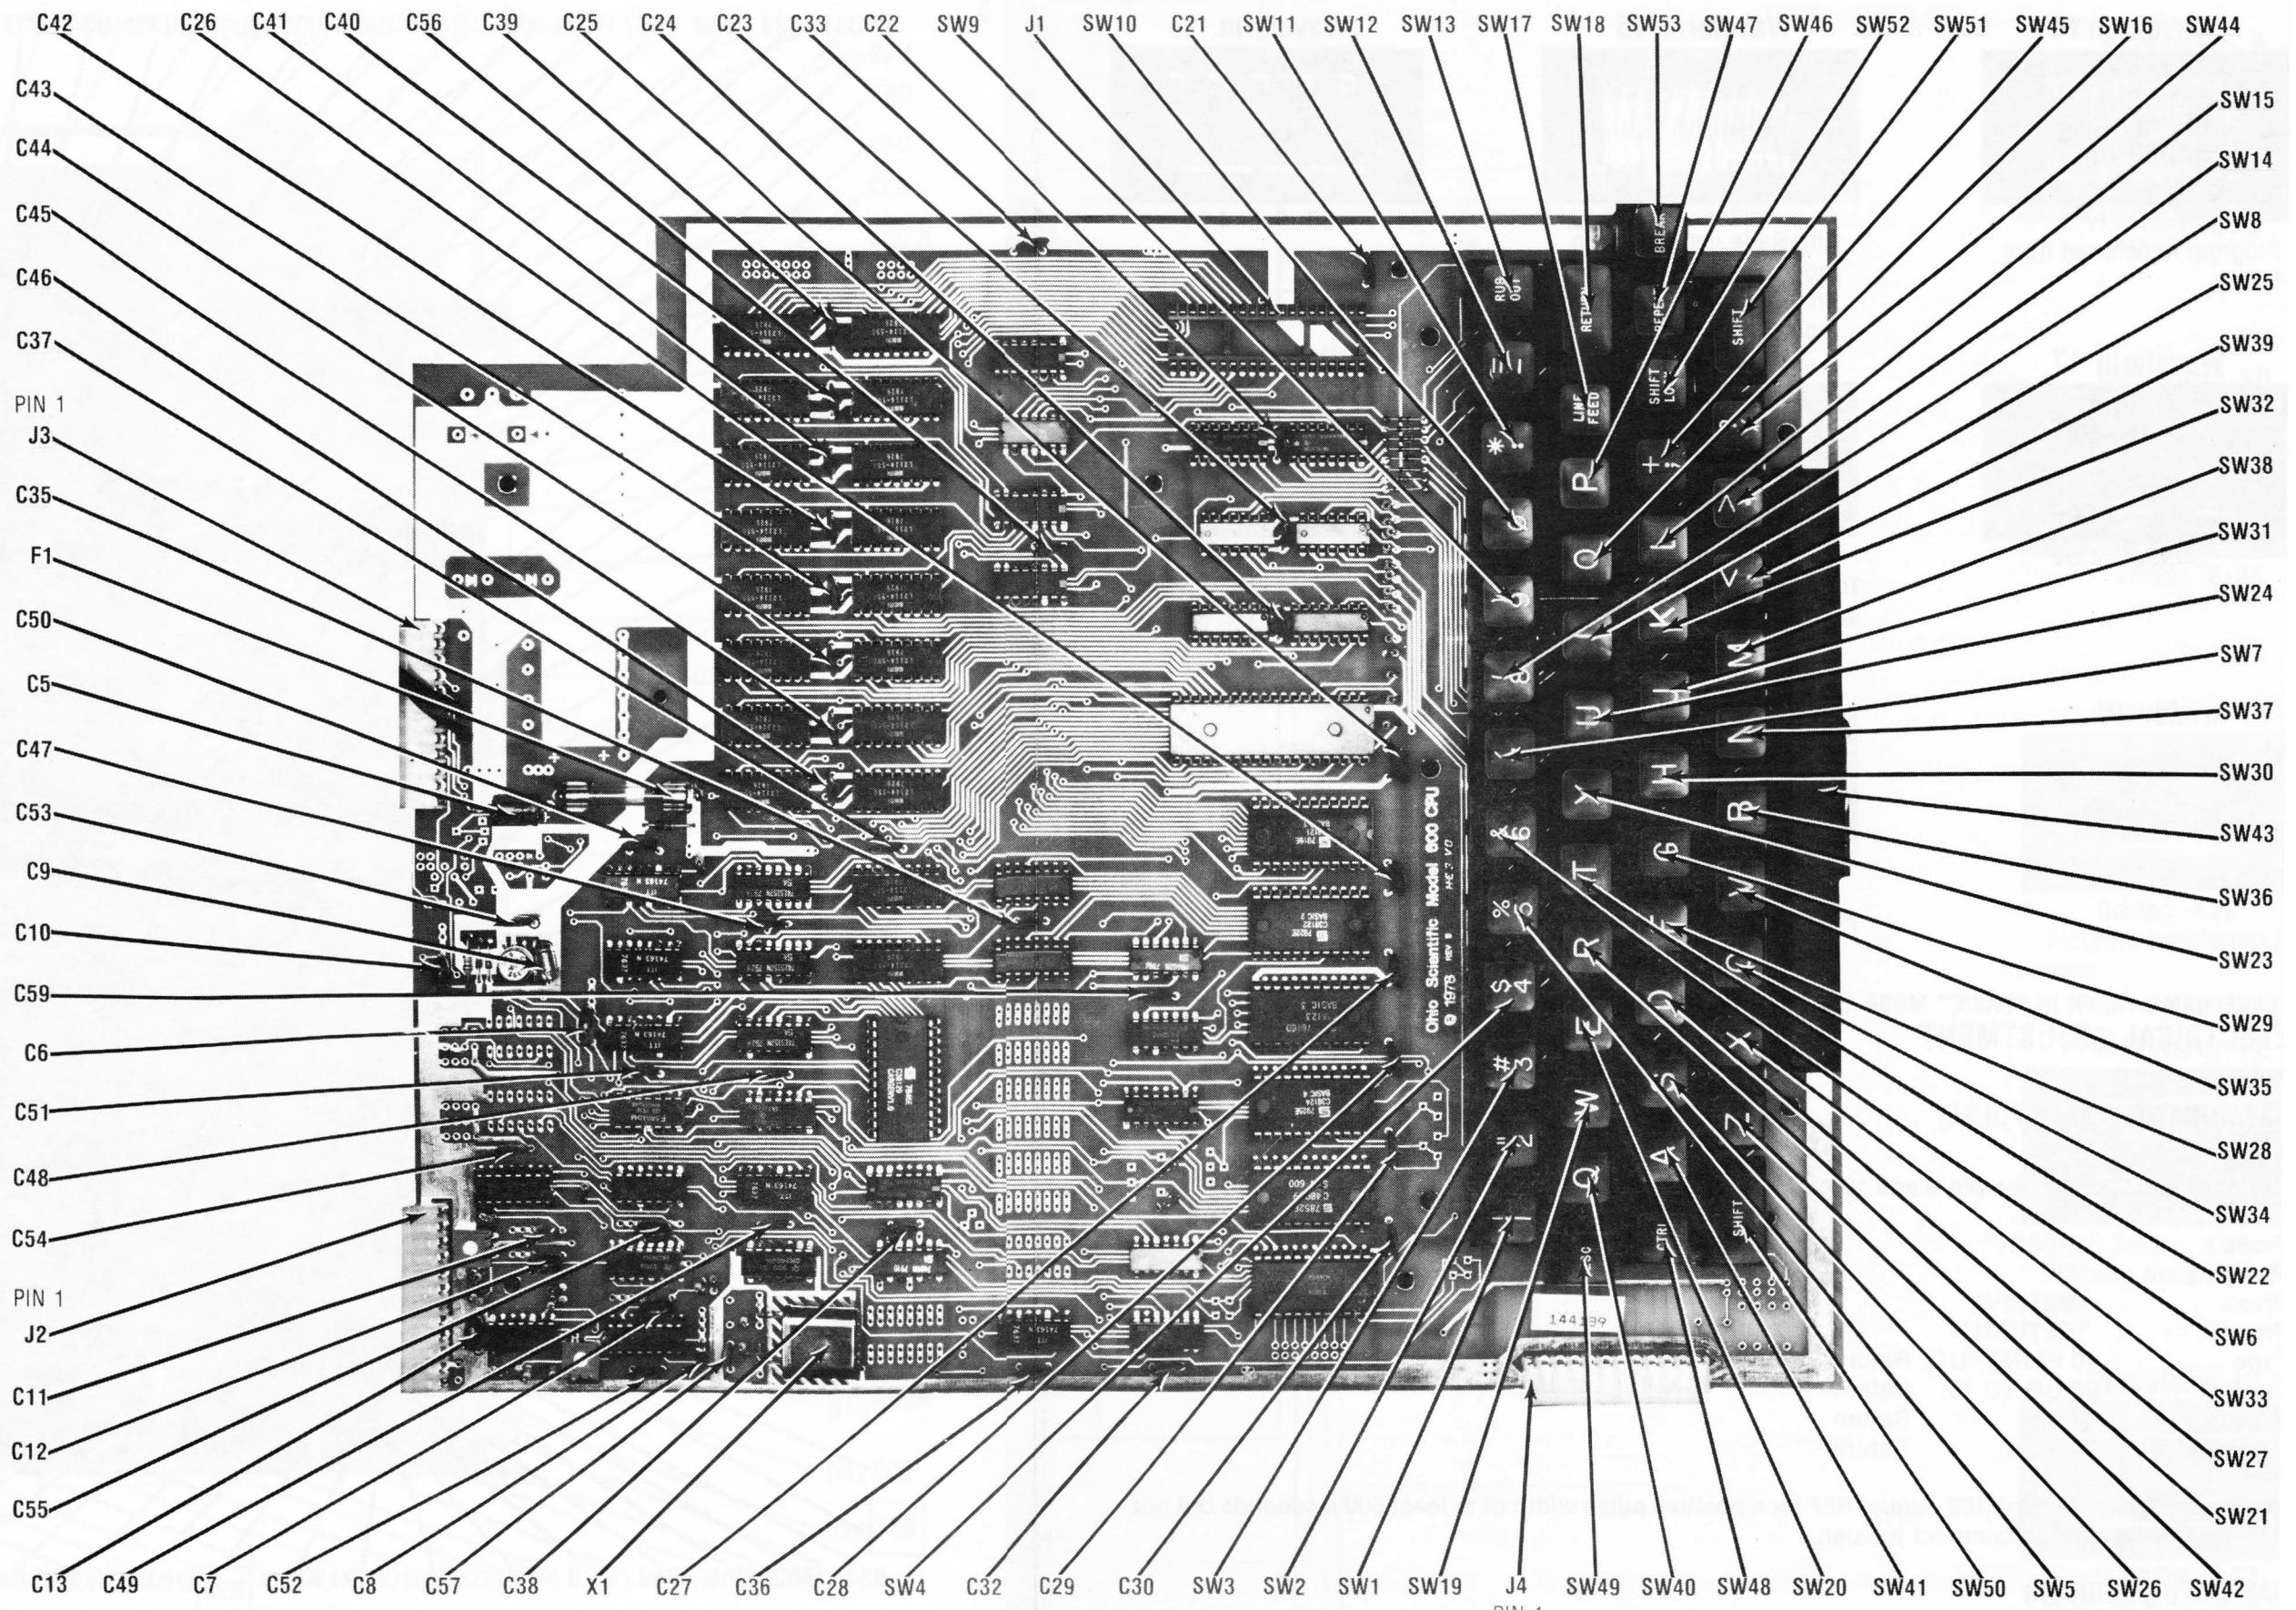

Remove floppy-disk cable (J3). Input of scope to pin 12 of U68. Adjust R9 for a negative pulse width of 400nSec  $\pm$  50nSec. Reconnect J3.

#### R10 RX CLOCK

Remove floppy-disk cable (J3). Connect a jumper from pin 9 of J3 to pin 10 of J3. Input of scope to pin 5 of U70. Adjust R10 for a positive pulse width of 1 $\mu$ Sec. Remove jumper and reconnect J3.

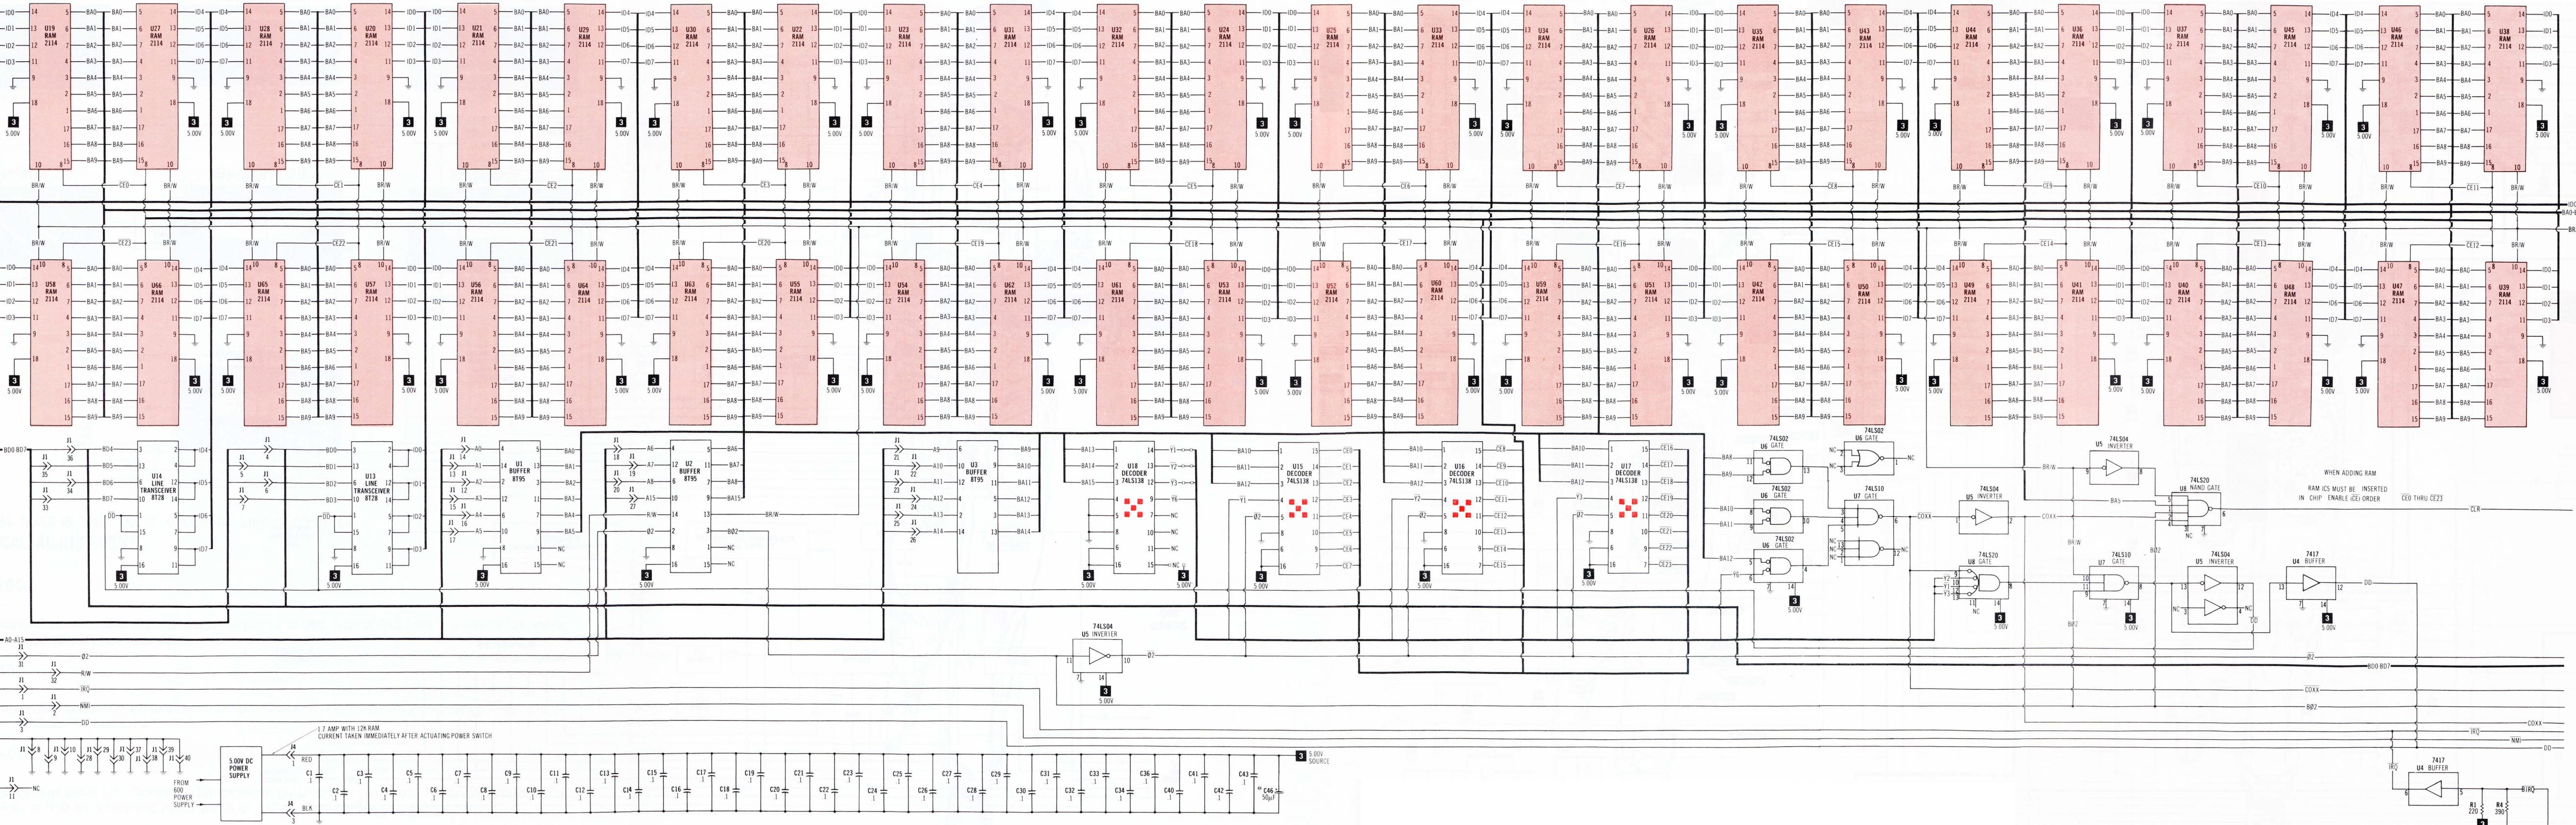

#### R19 RX DATA

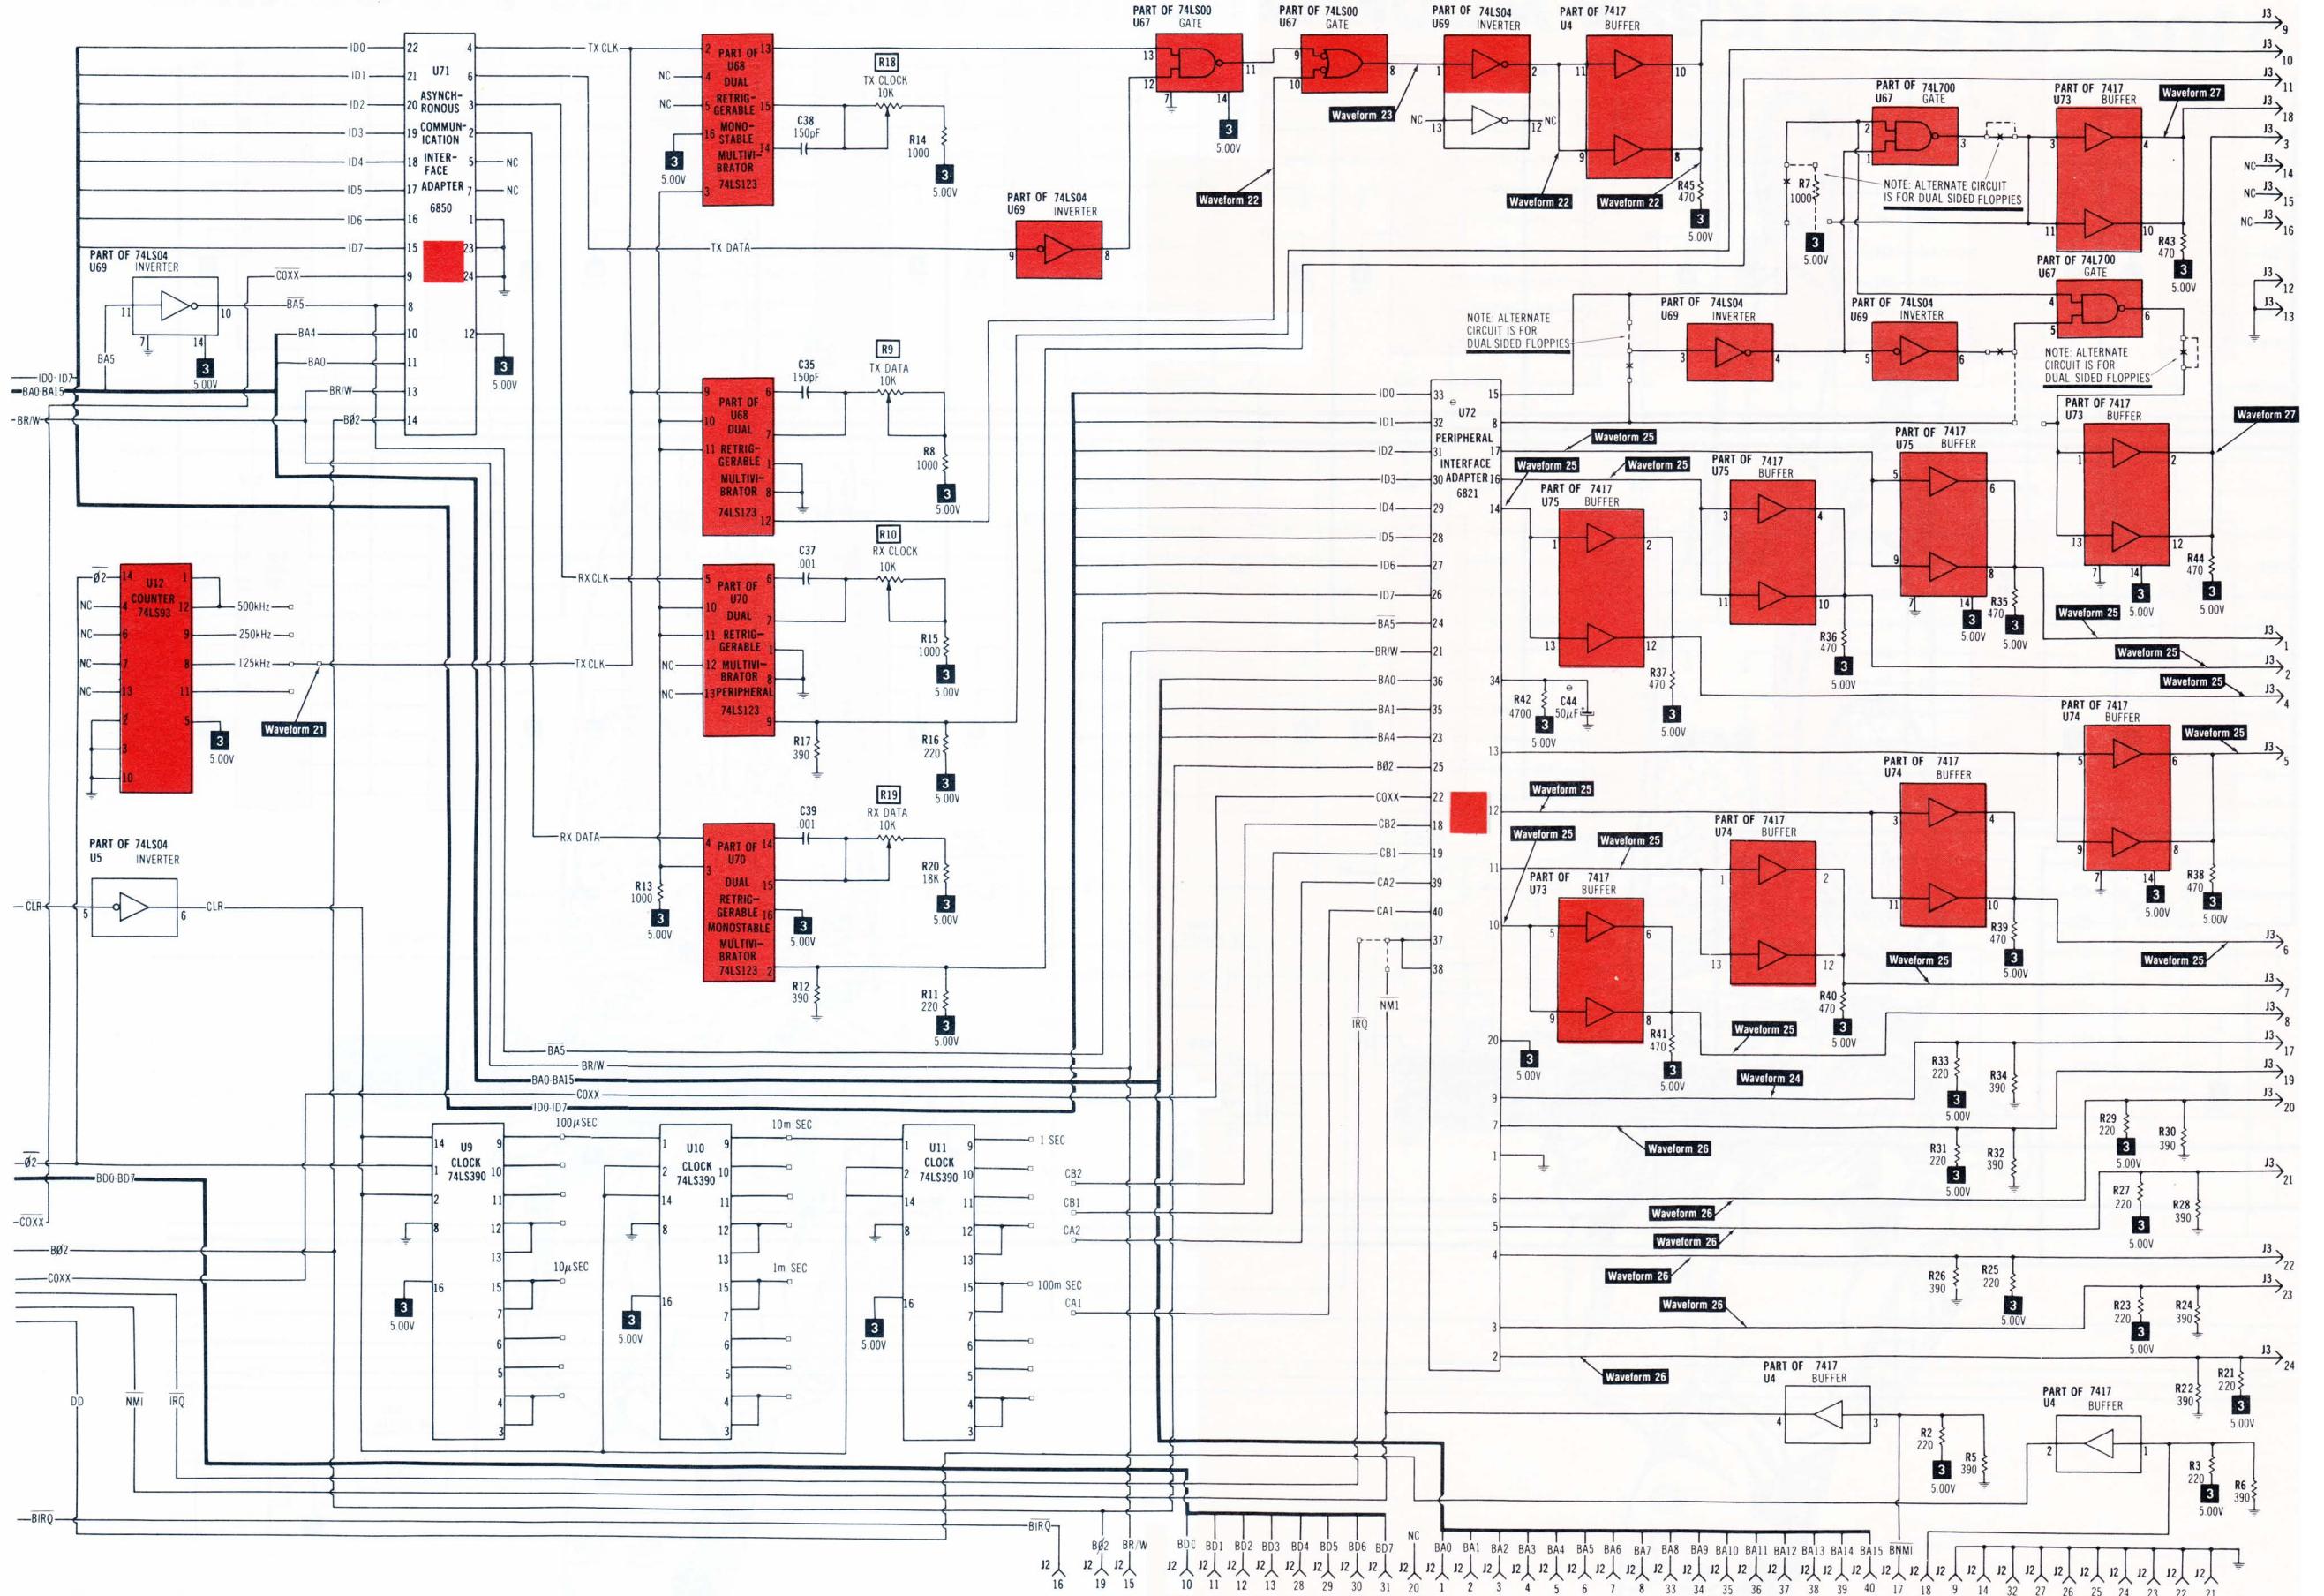

Remove floppy-disk cable (J3). Connect a jumper from pin 9 of J3 to pin 11 of J3. Input of scope to pin 4 of U70. Adjust R19 for a negative pulse width of 6 $\mu$  Sec. Remove jumper and reconnect J3.

## SCHEMATIC NOTES

—\*— Circuitry not used in some versions.

--- Circuitry used in some versions.

\* Nominal value

÷ Ground

— Chassis

⊕ See parts list

Item numbers in rectangles appear in the alignment/adjustment instructions.

Supply voltage maintained as shown in input.

Voltages measured with digital meter.

Terminal identification may not be found on unit.

Resistors are 1/4W or less, 5% unless noted.

Value in ( ) used in some versions.
